**NOW WITH
CUSTOM CUT CAPABILITY**

Cedar Peaks goes to greater lengths in quality craftsmanship – now available in 16' 8" and 25' lengths. Longer lengths give a virtually seamless appearance with fewer cuts, fewer seams.

Cedar Peaks

Super Polymer Vinyl Siding

- A** **High Tension Structural Return**
•Puts pressure on the double thick fold-over "windload" nail hem to help keep it tightly closed down on the panel
- B** **Double Thickness at Nailing Hem**
•Helps keep the siding on the wall even in high winds
- C** **Nail Depth Guide**
•Helps keep nails from being driven in too tight and ensures that the siding will be able to move enough to help prevent buckling
- D** **Drop Guard**
•Acts as a stop to help keep the siding panel from dropping too far down – or even out of the lock – while being installed
- E** **Hook and Hold Twister Lock**
•Designed to grab the panel butt and snap it in place
- F** **Wide Butt Design**
•Creates a distinct shadow line for a substantial look of quality
- G** **.046" Thickness**
•Heavy duty for lasting performance
